

Non-Penetrating Peak Roof Mount with 2 Rubber Mats, 1-pole Version, 60-inch Mast, Galvanized Steel with Powder Coating

KP-PRM-1-KIT

Features

- Easy assembly instructions
- Contains peak roof mount and 2 mats
- 5 ft tall center mast
- Secondary arm of 2.75 ft
- Powder coated galvanized steel
- Operating windspeeds up to 50 KM/h (31 mph)
- Survival windspeeds up to 100 KM/h (62 mph)
- All assembly hardware included
- Rubber mat for max surface tension/protection
- Standard 16" x 8" cinder blocks (Not included)

Applications

- De-centralized wireless networks (FreedomFi, Helium, POLLEN, XNET, MetaBlox, etc.)
- Wireless or satellite antenna
- Scientific and weather instrumentations
- Security camera and instruments
- Solar panel
- WISP (Wireless Internet Service Provider)

Description

The KP Performance KP-PRM-1-KIT is a non-penetrating antenna peak roof mount kit that includes 2 rubber mats (KPPA-NPM-MAT) and 1-pole version non-penetrating antenna peak roof mount (KPPA-PRM-1) that helps in easy installation of satellite dishes and antennas. This kit is used for easy installation of the peak roof mount which is available without pre-assembly.

This kit comes with a rubber mat that provides the best surface tension and surface protection. The 1-pole version non-penetrating antenna peak roof mount has a 60-inch center mast and it is suitable for roof applications. Ballast material (i.e., cinder blocks, concrete blocks, etc.) are used in these non-drill roof mounts to anchor them to the roof.

KP Performance non-penetrating antenna peak roof mount kit is available in stock and ready to ship the same day. Different kits are available with easy buy options for 1-pole version mount kit with detailed step-by-step installation documents. For further information on similar products, our expert technical support and knowledgeable sales team can help you get the perfect non-penetrating antenna peak roof mount kit as per your requirements.

Note: Ballast data should be determined by a local professional engineer. Adequate ballast material must be determined and provided by others

KP-PRM-1-KIT

Note:

- **Ballast data should be determined by a local professional engineer. Adequate ballast material must be determined and provided by others**
- Prior to installation, verify that the installation, roof material and supporting structures have been investigated and found capable to withstand load
- Place ballast material (i.e., cinder blocks, concrete blocks, etc.) evenly on both side with at least 4 on each side, total 8 blocks per mount approx. 300lbs over all base angles (Estimated Operational Ballast)
- All antenna installations **MUST** be grounded
- **KP Performance Antennas RECOMMENDS THAT BALLAST MATERIAL ALWAYS BE PLACED PRIOR TO MOUNTING ANTENNAS AND THAT THE MOUNT BE SECURED TO PREVENT HAZARDS FROM OCCURRING UNDER EXTREME WIND LOADING CONDITION**
- Inspect all bolts and screws for optimal tightness (recommended torque 13-14 lbs-ft.) to ensure there is no loose gaps after installation
- Recommended to use self -tapping screws provided with mount to reduce the loading of the roof if working environment is allowed to drill
- Inspect the mount, antennas, and tightness of nuts at six-month maximum intervals

Operational	50 Km/h (31 mph)	Under recommended Load
Survival	100 Km/h (62 mph)	Under recommended Load

CONTACT A LOCAL PROFESSIONAL ENGINEER TO DETERMINE PROPER LOADING vs BALLAST WEIGHTS

Operational: It is workable under 50km/h wind speeds.

Survival: The products may be deformed but will not fly away.

Mechanical Specifications

Size

Length	35.57 in [903.48 mm]
Width	33 in [838.2 mm]
Height	59.06 in [150.01 cm]
Weight	71.64 lbs [32.5 kg]

Environmental Specifications

Operating Temperature, Min	-40 deg C
Operating Temperature, Max	80 deg C
